

TESTIMONIALS

"The new Ellipson approach for coronal restoration provides an oval preparation close to the root canal anatomy when needed with the abrasive ultrasonic tip. The Ellipson post has all benefits of other RTD fiber posts whose mechanical properties are close to dentin. After more than 50 restorations using Ellipson, I am very satisfied and I recommend it to anyone."

Dr. Nicolas Cheleux *Private Practice. Former Assistante of Toulouse University, France*

'The oval ultrasonic tip resulted in a better post-space debridement than any circular ultrasonic tip in oval-shaped canals. The oval fiber post can fit perfectly into the Ellipson instrumented oval root canal leaving a very thin thickness of cement'

Prof. Marco Ferrari, *Professor and Chair of Restorative Dentistry and Dental Materials, University of Siena, Italy*
